PTM017:

How do I configure connections to Hubcapp Peripheral Agent?

The video shows you how to configure connections to Hubcapp Peripheral Agent. Complete the activities in this workbook to develop fluency in this topic.

> **Important:** *Prior to watching this video you should have downloaded and installed Hubcapp Peripheral Agent, see PTM015, and know how to start and connect the Hubcapp Peripheral Agent, see PTM016.*

Activity One

Configure connections to the Hubcapp Peripheral Agent.

1. Open Hubcapp Peripheral Agent.

Configure the Scale connection

2. Click on the Scale tab, then in the Configure Scale Connection section, enter:

    a. **Interface Type**: Internal Test Mode Only – Not for Live Use

> Note: Depending on the option selected from the Interface Type field, the fields below will vary. *For example*, if you were to select Serial, various serial scale type fields would appear.

3. In the Test and Configure Scale section, click on the **WEIGH** button.
4. In the field above review the weight and length details.
5. Click on the **SAVE** button.

Configure the Printer connection

6. Click on the Printers tab, and in the Thermal Label Format section enter:

    a. **Printer**
    b. **Format**

> Note: Printing options include:
>
> - Thermal Label Format, used primarily for roll type and fan folded labels
> - Laser Document printer, generally used for 8 ½ by 11 printing
> - Form Printer, typically used for pre-Printed forms
>
> **Important:** Before you start configuring printers, it's important to ensure all manufacturer print drivers are installed, as this could affect utilization of the hardware.

7. Click on the **TEST PRINT** button.

Configure Documents

8. Click on the Documents tab, and in the Image Resize and Margin Settings section enter:

    a. **Resize %**
    b. **Left Margin**
    c. **Top Margin**

9. Moving down to the Document Configuration section, locate the required document and enter:

    a. **Copies**
    b. **Specific Printer**

10. Repeat this process for all documents that require printing to a specific printer.
11. Click on the **SAVE** button.

Note: Upon saving a pop up will appear advising that the Document settings have successfully saved, and the default printer selected will now be used to print the specified document.

Configure Labels

12. Click on the Labels tab, and in the Label Configuration section locate the required label type and enter:

    a. **Copies**
    b. **Specific Printer**
    c. **Printer Format**

Note: Once a designating printer has been set for a label type, it will automatically override the default printer configured under the Printer tab.

---

13. Repeat this process for all labels types that require printing to a specific printer.
14. Click on the **SAVE** button.

Configure WebCam connection

15. Click on the WebCam tab, and in the Configure WebCam Device section enter:

    a. **Device Type**
    b. **Resolution**

16. In the Test and Configure WebCam section click on the **TEST CAPTURE** button.
17. In the field above ensure the webcam is working.
18. Click on the **SAVE** button.
